

Environmental Control Booth

Industrial Maid LLC has designed a unique environmental control booth to help contain fugitive dust in the industrial workplace. The system incorporates a three stage media style filtration system, powered by a totally enclosed motor and belt drive blower package. Three standard sizes are available - 6' width, 10' width and 20' width. The booth housing is modular in design with acoustical sound control. The air filtration module has fork lift slips and an airflow range from 4,500 to 15,000 CFM. As with other IM LLC equipment, the outer cabinet shell is manufactured using a recycled polyethylene plastic, making it lighter, quieter, less expensive and more environmentally friendly than a typical carbon steel cabinet. The booth systems do not require use of compressed air and have a lower energy consumption rate as compared to similar cartridge style units. For more information please contact us at Industrial Maid LLC, 721 Westgate Blvd, Lincoln, NE 68528. Call 877.624.3247 or visit our website at www.industrial-maid.com.
