## **INDUSTRIAL MAID RHV SERIES - WELDING VENTILATION HOODS**

**Industrial Maid LLC** introduces the new RHV welding hood – a complete packaged welding smoke and fume hood for industrial air filtration. The units can be configured to cover areas from 4' X 4' to 16' X 16' or larger if needed. A three stage filter system includes the baffle filter, 4" pleated filter (Merv) and a 95% multi-pocket main bag filter (Merv). These filters will handle oily weld smoke and options are available to include a final HEPA filter for stainless steel or other applications requiring higher efficiency filtration.

The RHV ventilation hood series incorporates a low static pressure motor blower package, require no compressed air and no handling of dust from trays or drums. The resulting efficiency translates into an economical solution for handling welding smoke and fumes; dollars saved as a direct result of controlling utility costs.
