Industrial Maid LLC is proud to announce their move to a new 9,200 sq ft facility near Cortland, NE. The company is a manufacturer and distributor of packaged air filtration and ventilation equipment. The products are used to capture welding smoke and fumes, grinding dusts, wood dust, fiberglass dust, oil mist, diesel smoke and vapors produced during industrial manufacturing processes.

IMLLC has developed a unique product line, offering equipment with cabinets manufactured using recycled high density polyethylene plastic. This cabinet material makes the systems lighter, quieter, less expensive, non-corrosive and more environmentally friendly than competitive steel housing cabinets currently on the market. The recycled plastic comes from discarded milk jugs and soda bottles. A standard T series unit saves over 320 milk jugs from the landfill.

IMLLC is owned by Todd Adam (formerly of Lanham, KS and a graduate of Odell HS) and Jeff Zvolanek (a graduate of Wymore Southern HS). Todd and Jeff both are graduates of the University of Nebraska Engineering program, Todd with a BSCM and Jeff with a BSIE. Todd is the general manager of the company, handling product development, production scheduling and the day to day business operations. Jeff is a sales engineer covering North America and works with the 30 plus distribution partners IMLLC has in Canada, Mexico and the United States. IMLLC also has a new distribution partner based in Miami, FL, that will offer international exposure with offices in Taiwan, China, South Korea, Brazil, and Venezuela.

The newest product IMLLC has designed is the Aztech Model DS series air cleaners for use in firehouses, municipalities, and diesel repair shops. The system offers a three stage filtration design to separate out and capture the diesel smoke, fumes and vapors. A 50/50 blend of carbon and potassium permanganate helps adsorb the dangerous vapors produced from the combustion in a diesel engine. A second new product is the Robotic "SIDE DRAFT" system. This three stage filter unit helps clean the welding smoke and fumes produced in robotic welding cells and automated welding processes. The unit has a 2" spark baffle, a 4" pleated pre-filter and a 10 pocket 95% high efficiency final filter.

Industrial Maid LLC has a six acre industrial parcel in the new Tower Industrial Park just north of Cortland. Plans include a new larger storage and assembly building in 2007. The land was formerly a farm and hog operation owned by Dennis and Susan Schlake. The

City of Cortland rezoned the land I1, along with 18 other acres on the corner on HWY 77 and Gage RD. Todd and Jeff are very glad to be back in a small town environment and are very satisfied with the cost of operations as compared to their former Lincoln, NE location.

Todd and his wife Holly, son Logan and daughter Ashlyn live on an acreage near Crete, NE. Todd's other interests include hunting, fishing, and all sports that involve the use of a ball.

Jeff Zvolanek and his wife Kay live in Lincoln. Jeff's interests include hunting and the training of German short hair dogs, sports, and flying as well as helping manage multiple businesses. Jeff and his wife are partners in two sports bar/casinos in Las Vegas (The Blue Diamond Saloon & Lucky Joe's Saloon) as well as WZ Investments LLC and Southwest Land Holdings LLC.
