INDUSTRIAL MAID MODEL T-3000E

Industrial Maid LLC is introducing a new industrial line of free hanging and ducted air cleaners with Dynamic “polarized electronic” V Bank cells. This system helps reduce the static pressure in the air filtration system, has very high efficiency rating and the patented filters are impregnated with carbon to help reduce VOC’s (vapors and gases) in the workplace. Reduction in static pressure allows for a lower horsepower motor/blower combination which in turn saves energy dollars throughout the life of the system. The cabinet shell is manufactured using recycled high density polyethylene plastic, allowing Industrial Maid products to be lighter, quieter, non-corrosive and environmentally sound for ISO 14001 compliance.
