

### **“Side Draft” – Filter Wall - Smoke, Fume and Dust Collection Unit**

Industrial Maid LLC has designed a unique “side draft” filter wall to be used on robotic and automated welding cells. The system is mounted on a forklift slip with access from front, back & both sides. The units have a three stage filter configuration – 2” spark baffles, 4” pleated pre-filters and 10 pocket 95% 120 sq ft media bags. The design offers a low cost of ownership with no requirement for compressed air and lower horsepower requirements than similar cartridge units. The filters will handle oily smoke applications as well as dust and grinding grit produced in manufacturing finishing operations. It is easy to service, requires no ducting and can be quickly relocated along with the robotic cell. For more information please contact us at Industrial Maid LLC, 351 S 12<sup>th</sup> Rd, Cortland, NE 68331.
