

RH Series Ventilation Hoods

Industrial Maid introduces a full line of Robotic Welding Ventilation Hoods – in airflow ranges of 1,000 CFM to 10,000 CFM. The unique systems have a steel fabricated cabinet, easy access filter service doors and a three stage filter combination. The inlet filter is a washable baffle filter, the pre-filter is a Merv 7 pleated filter and the final filter is a multi-pocket Merv 13 filter bag. A final HEPA filter is available for stainless steel welding (to control hexavalent chromium). The product has been tested and proven to handle both dry and oily welding applications. The units are energy efficient, simple to service and offer a “low cost of ownership”. No dust trays or dump bins are necessary and the units do not require any compressed air. For more information on our performance guarantee and available sizes to meet your specific welding cell application needs – contact Jeff Zvolanek (877)624-3247 or jzvolanek@industrial-maid.com.
